ADVISORY • PRM-2026-0142

Severity: High

TLP: AMBER

Ransomware campaign targeting hospital networks

Overview

A ransomware group is encrypting patient-record systems at hospitals after entering through an unpatched remote-access gateway. 42 hospitals across five states have reported disruption since 22 September. Attackers are believed to be demanding payment in cryptocurrency. Backups kept on the same network were also encrypted in several cases.

Indicators found in the source

Vulnerability	CVE-2026-XXXXX (sample)
IP addresses	6 internal addresses • internal copy only
File fingerprint	SHA-256 9f2c...e41a (sample)

Recommended actions

1. Apply the vendor's September patch to every remote-access gateway today.
2. Block the listed addresses at the network edge and review connection logs.
3. Move backups offline and test that one restore works end to end.

Source trace

What happened

42
hospitals disrupted

5
states affected

22 Sep
first attack seen

Attackers entered through remote-access gateways that had not received the September patch, then locked patient-record and billing systems.

Speaker notes

 Listen

Start with the scale: 42 hospitals across five states in one week. Stress that every case began with the same unpatched gateway, so the fix is simple and urgent. Pause here for questions about affected states.

TLP: AMBER

Ransomware attack on hospital networks

30 September 2026 • 1 page • 90-second read

What happened

A ransomware group has disrupted 42 hospitals in five states since 22 September by entering through remote-access gateways that missed the September patch.

Why it matters

Patient-record and billing systems are down in affected hospitals. Backups on the same network were also locked, which slows recovery.

What we are doing

An advisory has gone to hospital IT teams with three actions: patch gateways, move backups offline and test a restore.

Decision needed

Approve a public awareness post and ask state health departments to confirm patching by Friday.

Severity: High

Ransomware campaign targeting hospital networks

A ransomware group is encrypting patient-record systems at hospitals after entering through an unpatched remote-access gateway. 57 hospitals across six states have reported disruption since 22 September. Attackers are believed to be demanding payment in cryptocurrency. [analyst note]

AM

Your comment • on the highlighted line
Fine to keep as an analyst note, since it is clearly labelled. No change needed.

Recommended actions

1. Apply the vendor's September patch to every remote-access gateway today.
2. Block the listed addresses at the network edge.
3. Move backups offline and test that one restore works.
4. Reset passwords for gateway admin accounts.

Automatic checks

- ✓ Every line traced to source
48 of 49 • 1 labelled analyst note
- ✓ Facts match across outputs
Numbers, dates, names agree in 3 languages
- ✓ Sensitive details hidden in public posts
6 IPs and 1 email removed
- ⚠ Public-release wording
1 phrase softened to avoid panic
- ✓ No hidden instructions in sources
- ✓ Sharing label applied

REVIEW • JOB #0139 • FROM PRIYA SHARMA

Send back with notes

Monsoon flood advisory, coastal districts

Cancel

Why are you sending it back?

✓ Facts need checking

✓ Language quality

Tone

Sensitive detail

Formatting

Line comments (2)

+ Add comment

Advisory • Tamil • paragraph 1

“தூத்துக்குடி”

This district is not in the English source. The source lists Ramanathapuram. Please recheck the Tamil version.

Advisory • English • actions

“Evacuate immediately”

Source says “move to safer places if water rises”. Please match the source wording.

Note to Priya

Good structure overall. Please fix the district name in Tamil and match the evacuation wording to the source, then resend.

Priya will see this on her dashboard.

 Send back to Priya

Tamil version

Paragraph 1

கடலோர மாவட்டங்களில் கனமழை எச்சரிக்கை. கடலூர், நாகப்பட்டினம் மற்றும் தூத்துக்குடி மாவட்டங்களில் உள்ள மக்கள் தண்ணீர் உயர்ந்தால் பாதுகாப்பான இடங்களுக்குச் செல்லவும்.

English source says

“Heavy rain warning for coastal districts: Cuddalore, Nagapattinam and Ramanathapuram. Move to safer places if water rises.”

Ransomware campaign targeting hospital networks

Issued by	[ISSUING OFFICE]
Signed by	Arjun Mehta
Signed on	30 Sep 2026, 10:21
Changed since?	No
Record	#0142

☐ Read the summary in हिन्दी

 Share this result

Not genuine

This looks like a scam. Do not click or reply.

Why we think so

- ✗ No digital signature from any real office.
- ✗ Suspicious link: gov-alert-update.xyz is not a government website.
- ✗ Asks for your OTP. Real alerts never do.
- ✗ Pressure words: "act within 1 hour".

 Report it: call 1930

 Warn my family and friends
